COOLANT TEMPERATURE SENSOR
PART NUMBER 12146312

FEATURES
• Design for Manufacturability
• Cost Effective
• Robust Design
• Few Components & Assembly Processes
• Thermistor Technology
• 100% Calibration Certified

Thermal & Electrical Properties

Typical Voltage Supply 5V dc
Operating Temperature -40°C to 135°C
Resistive Range(Ω) See Table
Dissipation Constant ‡ 24 mW/°C
Thermal Time Constant ‡‡ 20 to 30 seconds
Accuracy See Table

Thermal Time Constant ‡‡
The ratio, at a specified ambient temperature, of the change in the power dissipation of the sensor to the resultant temperature change of the thermistor. Test medium: silicone oil.

Mechanical Characteristics

Sensor Body Material Brass Housing
Connector PBT 30% GF
Hex Size 18.90mm (3/4")
Thread Size 3/8" - 18 NPTF
Thread Sealant GM09985473
Validated Sealing Pressu ‡‡‡ 145 kPa
Mating Connector & Seal 12162193
Installation Torque 20 N-m, dynamic
Overall Weight 39.5g

Circuit Schematic

6312 Data Sheet/05.14.97
**TEMPERATURE SENSOR**

**PRODUCT DATA**

Note: Temperature Sensor Calibration Resistance Guaranteed by 100% Automated Calibration Certification.

Important: The values above are for the unloaded thermistor, as shipped from Packard Electric, and does not reflect the effects of application system errors and aging.

*Note: Please contact PE Engineering for the resistance vs. temperature curve for your temperature sensor application. Due to self-heating effects of the thermistor, the resistance is dependent on the application.

Since thermistors are "continuous function devices", resistance vs. temperature data is available for numbers beyond those specified above.
