

PE4UV

UNMANNED VEHICLE ENGINE CONTROL

The PE4 family of electronic units are adjustable, compact and capable of controlling every aspect of a small engine.

PE4 controllers have been developed specifically for the unmanned vehicle industry... no more compromises.

Performance Electronics can provide full PE4 integration projects with existing or new engine designs and airframes.

Features:

- Standard and custom designs
- Easily adaptable, modular hardware and software
- Completely tunable
- Many UV specific features including thermocouple inputs, customer specific connectors, 12v/28v supply, data logging, CAN bus, password protection, etc.
